about this book for the last 40 years nursing research has been struggling to establish its theoretical roots and legitimate place within the wider arena of research in the health sciences overshadowed by the medical endeavour both resources and support have been meagre initially this medical hegemony also restricted the range of research designs by favouring the quantitative approaches that have formed the backbone of much clinical research however despite these restrictions nursing research has developed a particular diversity which matches the eclecticism of the discipline itself nursing and nurses have rapidly recognized that health related research problems often require a multi faceted approach that can be realized most effectively through multi disciplinary activities not unexpectedly however individual researchers have frequently remained entrenched in the particular methodologies with which they are familiar and have only reluctantly and perhaps wisely ventured beyond these in contrast the aim of this book has been to gather together material that reflects the diversity and richness of research in nursing to juxtapose different designs springing from different epistemologies with the aim of stimulating a more holistic approach it hopes to provide readers with an understanding of nursing research through a consideration of the issues involved

this comprehensive collection offers a unique look at nursing practice theory research and nursing history from various critical theoretical perspectives it aims to initiate an international discussion among scholars from diverse countries particularly germany and anglo american countries coming from distinctive schools of thought e g german critical theory and post structural approaches and influenced by their respective histories of sciences this book analyzes and criticizes nursing theory nursing research and practice along several dimensions nursing ethics subjectivity body and flesh leib technology power history and education
